New report on the future of Wyoming's water with climate change

The Ruckelshaus Institute of Environment and Natural Resources (ENR) at the University of Wyoming has produced a 28-page report written for a broad audience, "Assessing the Future of Wyoming's Water Resources: Adding Climate Change to the Equation". The lead author was Steve Gray, Wyoming State Climatologist and WWA team member. [Read more about the report at UW ENR](#) - [Download the report](#)

New WWA report on findings from the "Dealing with Drought—Adapting to a Changing Climate" Workshops

The WWA, in conjunction with the Colorado Water Conservation Board (CWCB), presented the "Dealing with Drought—Adapting to a Changing Climate" workshop series in October 2009 in three locations around Colorado. This report summarizes the findings from all three workshops, including climate literacy gaps among participants, the impacts of the 2000s drought experienced by participants, and potential impacts from climate change identified by participants. These findings will be incorporated into the revision of the state Drought Plan. The lead authors included several WWA team members and Colorado State Climatologist Nolan Doesken. [Read more about the report on the WWA workshop webpage](#) - [Download the report](#)

WWA identifies regional vulnerability to climate change, and develops information, products and processes to assist water-resource decision makers throughout the intermountain west.
