

THE AGRICULTURE DEFENSE COALITION
PRESENTS

GEOENGINEERING (Climate Remediation) & **SOLAR RADIATION MANAGEMENT** (Reduction of Direct Sunlight Reaching the Earth)

Why are the
trees dying
or in decline
in your area?

**WE INVITE EVERYONE TO “LOOK UP” & TAKE NOTE OF THE ATMOSPHERIC
GEOENGINEERING EXPERIMENTS ONGOING IN OUR SKIES TODAY &
LEARN MORE ABOUT THE RESEARCH SCHEMES PLANNED TODAY FOR USE TOMORROW**

GEOENGINEERING (Climate Remediation) is defined as “planetary-scale environmental engineering of our atmosphere, our weather, the oceans, and the Earth itself” to reduce the amount of direct sunlight reaching the Earth. These experimental schemes, that have been planned for our future or have been implemented, require no public notification, consent or oversight and do not fix any climate or weather problems (schemes only mask symptoms).

GEOENGINEERING schemes involve intentionally introducing particles, chemicals or gases into our upper atmosphere without public consent, oversight, or notification. These schemes include, but are not limited to, cloud whitening experiments (using salt and other particulates), and putting more water vapor (a greenhouse gas), into the atmosphere to create man-made clouds; an artificial cloud cover. (Weather Modification Experiments)

GEOENGINEERING programs & experiments result in escalating impacts that are being experienced across the United States. (More Information May be Found on the ADC Website)

- Increases Human Health Problems Such As: Asthma, Eye & Skin Irritations, Raspy throats, Pneumonia-Like Symptoms, & More (Many Toxic Chemicals & Particles Released via Rocket Experiments & Rocket Fuel Emissions)
- Increases in molds, mildew, and viruses
- Lack of Vitamin D and Associated Human Health Problems
- Increasing Reduction in Solar Panel Power Production
- Decline in Tree and Plant Health, Increasing Acid Rain, Air, Soil & Water Pollution
- Reduced Photosynthesis = Lower Crop Production and increased declines in tree health
- Increasing Acid Rains, Air, Soil and Water Pollution from Geoengineering Experiments
- Negative Effects on Biodiversity and Ocean Health (Ocean Iron Fertilization + Other Experiments)

SHORT LIST OF A FEW UNCONTROLLED GEOENGINEERING EXPERIMENTS:

- Intentional & Experimental Weather Modification Programs & Experiments
- NASA Particle & Chemical Release Experiments (CRRES) Barium-Strontium-Lithium-Calcium-SF₆ (Sulfur hexafluoride) and other ionospheric experiments – Rockets
- Man-Made Cloud Experiments – Water Vapor Experiments – Cloud Whitening Experiments
- U.S. Navy / NASA Charged Aerosol Release Experiment (CARE-2009) using Rockets to Release an atmospheric aluminum oxide dust cloud over the East Coast of the U.S. (More Experiments Planned)
- Aluminum Coated Fiberglass Releases (Chaff) – All branches of the U.S. Military (Tons Released Every Year)

The U.S. House Science & Technology Committee (3 U.S. House Hearings), and the UK House of Commons in England held separate hearings in 2009-2010 and are working together to initiate additional Geoengineering experiments, under proposed “Global Geoengineering Governance” rules, which exclude public debate, participation, knowledge, consent or oversight. (Taxpayer funding has been requested)

The Agriculture Defense Coalition is seeking information & photographs of tree decline in your area or backyard garden crop production difficulties, unusual plant health symptoms or failures. Please contact the ADC.
