**“Earth Cooling Experiment”**

**July 17th, 2012 Tuesday 10:14 PM. KOB Channel 4 New Mexico News Report**

**“...Researchers want to test out a plan to artificially cool-down the earth by flying a hot air balloon over New Mexico. Harvard scientists tell Britain's Guardian Newspaper they plan to spray sun-reflecting chemicals into the atmosphere. They would do that from a hot air balloon, 80,000 feet over Ft. Sumner sometime within the next year.**

**They hope to replicate the effects of chemicals released naturally into the air by volcanoes. They say the test won't be big enough to change New Mexico's weather. However, other scientists warn that widespread use of this could have a negative impact on the Earth's weather systems...” End of Special News Report**

**(Note: Water Vapor is A Highly Potent Greenhouse Gas)**

**Questions:**

**Will Sulfur (Aluminum Oxide – Titanium Oxide) be used in New Mexico?**

**What are the Atmospheric Ozone, Human-Health, Climate, Air, Soil, Water & Environmental Impacts?**
