

FILE - This Monday, Dec. 15, 2003 file picture shows the then-idled Davis-Besse nuclear power station in Oak Harbor, Ohio. The Davis-Besse plant was shut down for two years starting in 2002 after workers found an acid leak that nearly ate through a steel cap on the reactor vessel at the plant. It was the most extensive corrosion seen at a U.S. nuclear reactor. (AP Photo/Mark Duncan)
