

Research cooperation

Research & Development is not an activity that can be managed in isolation. Synergies are created through coordination with other bodies and institutions.

Under the auspices of SESAR long-term and innovative research (WP-E), **EUROCONTROL manages Research Networks**, a grouping of researchers from academia, industry or public research establishments that share common interests and expertise in a particular field of air traffic management (ATM).

In a continuous effort to further the science that is necessary to lead to a harmonised global ATM system, since 1997 the United States Federal Aviation Administration and EUROCONTROL have jointly organised an **international conference series focused on ATM research and development**. These conferences have been held in both Europe and the USA.
