

[Radiologic Health Branch \(RHB\) -- Radiation Monitoring Reports And Information](#)

According to the U.S. Nuclear Regulatory Commission (NRC), Japan's nuclear emergency presents no danger to California. CDPH is working closely with our state and federal partners, including NRC, U.S. Environmental Protection Agency, the U.S. Department of Energy, FEMA Region IX, and the California Emergency Management Agency ([CalEMA](#)). CDPH-RHB maintains air monitoring stations throughout California.

CDPH has increased surveillance from once a week to every 48 hours and will post results on this page.

All of us are exposed to radiation every day, both from natural sources such minerals in the ground, and from man-made sources such as medical x-rays. According to the National Council on Radiation Protection and Measurement, the average annual radiation dose per person in the U.S. is 620 millirem (<http://www.epa.gov/radiation/understand/perspective.html>). For example, a Los Angeles-to-Chicago airplane flight results in a dose of 2.3 millirem.
