It means this meter is read 24 times per day instead of once per month. Giving consumers more visibility into their energy consumption and utility companies a deeper understanding of how energy is being used. eMeter worked with IBM and is using Power Systems and IBM application and service management software to enable utilities to manage data from over 20 million smart meters making readings every hour – or more than four times the scale of any other utilities industry benchmarks. A smarter business is built on smarter software, systems and services.
