Jae C. Hong / AP

A cleanup worker leaves the beach as storm clouds approach in Grand Isle, Louisiana, on Sunday, May 30. A relief well that's currently being drilled, which is supposed to be the long-term solution, won't be done for at least two months. That would be in the middle of the Atlantic hurricane season, which begins Tuesday.

### Health risks spread with oil spill

At least 9 clean-up workers at the BP oil spill have reported sickness. Some scientists say oil and dispersants could cause respiratory, neurological, or genetic damage. Michelle Kosinski reports.

### Oil and hurricanes don't mix

There is serious concern about what will happen if a hurricane churns up the oil that's spilled into the gulf. The Weather Channel's Mike Seidel has more on the possible impact a hurricane might have on the spread of oil.
