In case the world can't contain its carbon emissions, among geoengineering fixes Dan Whaley, founder and chief executive of California-based Climos, hopes tiny plankton that live on the ocean surface can be used to absorb CO2 as they grow.

Climos Notes**Outside News**

"These are not silver bullet solutions, but things that might take the edge off," he told Reuters. "What is the risk of doing nothing? We think it's so extraordinary it's apocalyptic. These geoengineering projects, the research into this, is an exercise to reduce future risk."
