The projects involve the manipulation of the ionosphere and the alteration of the earth's magnetic fields. This technology seems to have both localized and global capabilities. Evidence also indicates that this technology has the capability of manipulating human behavior and mood patterns.</p> <p>All of this amazing technology originated from a Serbian immigrant named Nikola Tesla, who came to the United States just in the 1890s. Tesla experimented with electromagnetic flux and studied the earth's gravitational field. During his research he discovered that ionization of the atmosphere would alter when it was charged by radio wave transmissions in the low frequency range of 10 to 80 Hz.</p> <p>Further studies indicated that with positive ionization, people and animals became tired and lethargic and with negative ionization the effect was one of feeling active and energetic. Another interesting aspect of this technology is the effect which harmonious radio frequencies make when they impact air molecules.</p> <p>The molecules become excited and give off negatively charged</p>

electrons which readily combine with hydrogen and oxygen to produce water molecules. But even more profound is the fact that this type of radio wave also carries positively charged ions through the ionosphere into the magnetosphere. The positively charged ions then become trapped in the Van Allen belts, traveling between the Aurora Borealis and the Aurora Australis, right where we coincidentally have holes in the ozone layers.

Freon, the ozone killer, by its nature dissipates quickly. However, when radio waves hit already unstable freon precipitates, they are so reactive that they can not move on and dissipate into the magnetosphere.

Weather Warfare

The former Soviet Union developed a project on this area known as the Woodpecker system. It involves transmission of extreme low frequency (ELF) waves at about 10 Hz using Tesla transmitters in Angarsk and Khabarovsk in Siberia, Gomel, Sakhalin Island, Nikolayev in the Ukraine, Riga in Latvia. The one site in Riga was moved to Cuba, in a site near Bejucal, 60 miles south of La Habana. At the early stages of operation, there were some 2,500 Russian personnel who maintained and operate the research station.

Presently, the research station is operated by Cubans, with the assistance of Chinese personnel. These transmitters generate electromagnetic transmissions that produce an ELF scalar grid over the United States. This is done by transmitting these low frequency scalar waves in pairs so that they converge at a predetermined point on the earth's surface and cause a disruption of the atmosphere. This technology can be used to alter the course of the jet stream and set up long-term weather blocks.

The long-term California drought in the 80s was caused by a massive ridge of high pressure 800 miles off the California coast which hovered for extended periods of time, blocking the usual flow of moist air coming from the Pacific. This was one of the most unusual national patterns ever recorded. Evidence suggests that this was possibly caused by Woodpecker system.

Most recently, 2002, Florida and Central America experienced a tremendous and unusual drought, the worst in many years, which could have been caused by the system in place in Cuba. This phenomenon of long lasting centers of high pressure is not limited to producing drought. They can also produce severe flooding by producing large amounts of rainfall.

It is interesting to note that the Russians are now openly marketing a small version of their weather engineering system called Elate, which can be fine tune weather patterns over a 200 mile area.

Weather Control

Avalanches of energy dislodged by such radio waves could hit us hard. Their work suggests that technicians could control global weather by sending relatively small 'signals' into the Van Allen belts (radiation belts around Earth). Thus Tesla's resonance effects can control enormous energies by tiny triggering signals.

The Begich/ Manning book asks whether that knowledge will be used by war-oriented or biosphere-oriented scientists.

The military has had about twenty years to work on weather warfare methods, which it euphemistically calls weather modification. For example, rainmaking technology was taken for a few test rides in Vietnam. The U.S. Department of Defense sampled lightning and hurricane manipulation studies in Project Skyfire and Project Stormfury. And they looked at some complicated technologies that would give big effects. Angels Don't Play This HAARP cites an expert who says the military studied both lasers and chemicals which they figured could damage the ozone layer over an enemy. Looking at ways to cause earthquakes, as well as to detect them, was part of the project named Prime Argus, decades ago. The money for that came from the Defense Advanced Research Projects Agency (DARPA, now under the acronym ARPA.)

In 1994 the Air Force revealed its Spacecast 2020 master plan which includes weather control. Scientists have experimented with weather control since the 1940's, but Spacecast 2020 noted that "using environmental modification techniques to destroy, damage or injure another state are prohibited". Having said that, the Air Force claimed that advances in technology "compels a reexamination of this sensitive and potentially risky topic."

40 Years of Zapping the Sky?

As far back as 1958, the chief White House advisor on weather modification, Captain Howard T. Orville, said the U.S. defense department was studying "ways to manipulate the charges of the earth and sky and so affect the weather" by using an electronic beam to ionize or de-ionize the atmosphere over a given area.

In 1966, Professor Gordon J. F. MacDonald was associate director of the Institute of Geophysics and Planetary Physics at

the University of California, Los Angeles, was a member of the President's Science Advisory Committee, and later a member of the President's Council on Environmental Quality. He published papers on the use of environmental-control technologies for military purposes. MacDonald made a revealing comment:

"The key to geophysical warfare is the identification of environmental instabilities to which the addition of a small amount of energy would release vastly greater amounts of energy."

World-recognized scientist MacDonald had a number of ideas for using the environment as a weapon system and he contributed to what was, at the time, the dream of a futurist. When he wrote his chapter, "How To Wreck The Environment", for the book *Unless Peace Comes*, he was not kidding around. In it he describes the use of weather manipulation, climate modification, polar ice cap melting or destabilization, ozone depletion techniques, earthquake engineering, ocean wave control and brain wave manipulation using the planet's energy fields. He also said that these types of weapons would be developed and, when used, would be virtually undetectable by their victims. Is HAARP that weapon? The military's intention to do environmental engineering is well documented.

U.S. Congress' subcommittee hearings on Oceans and International Environment looked into military weather and climate modification conducted in the early 1970's. "What emerged was an awesome picture of far-ranging research and experimentation by the Department of Defense into ways environmental tampering could be used as a weapon," said another author cited in *Angels Don't Play This HAARP*.

The revealed secrets surprised legislators. Would an inquiry into the state of the art of electromagnetic manipulation surprise lawmakers today? They may find out that technologies developed out of the HAARP experiments in Alaska could deliver on Gordon MacDonald's vision, because leading-edge scientists are describing global weather as not only air pressure and thermal systems, but also as an electrical system.

Small Input, Big Effect

HAARP zaps the ionosphere where it is relatively unstable. A point to remember is that the ionosphere is an active electrical shield protecting the planet from the constant bombardment of high-energy particles from space. This conducting plasma, along with Earth's magnetic field, traps the electrical plasma of space and holds it back from going directly to the earth's surface, says Charles Yost of Dynamic Systems, Leicester,

North Carolina.

"If the ionosphere is greatly disturbed, the atmosphere below is subsequently disturbed." Another scientist interviewed said there is a super-powerful electrical connection between the ionosphere and the part of the atmosphere where our weather comes onstage, the lower atmosphere. ne man-made electrical effect - power line harmonic resonance - causes fallout of charged particles from the Van Allen (radiation) belts, and the falling ions cause ice crystals (which precipitate rain clouds).

What about HAARP? Energy blasted upward from an ionospheric heater is not much compared to the total in the ionosphere, but HAARP documents admit that thousandfold-greater amounts of energy can be released in the ionosphere than injected. As with MacDonald's "key to geophysical warfare", "nonlinear" effects (described in the literature about the ionospheric heater) mean small input and large output. Astrophysicist Adam Trombly told Manning that an acupuncture model is one way to look at the possible effect of multi-gigawatt pulsing of the ionosphere. If HAARP hits certain points , those parts of the ionosphere could react in surprising ways.

Smaller ionospheric heaters such as the one at Arecibo are underneath relatively placid regions of the ionosphere, compared to the dynamic movements nearer Earth's magnetic poles. That adds another uncertainty to HAARP - the unpredictable and lively upper atmosphere near the North Pole.

HAARP experimenters do not impress common sense Alaskans such as Barbara Zickuhr, who says "They're like boys playing with a sharp stick, finding a sleeping bear and poking it in the butt to see what's going to happen." Could They Short-Circuit Earth?

Up to 2001, there was not scientific evidence that these techniques could "develop, change, modify" hurricanes. However, this doesn't mean that research efforts have been made to make this possible.

And a little help from my Cuban husband, whos father was in the military until he was put in a Cuban prison, I will be posting some other things on Cuba's

biological threat to the free world: Yes this is possible from Cuba folks.

Due to the Economic Uncertainties... the light at the end of the tunnel will be turned off until further notice.
