Hutchinson Bill (S-517) will get its day in the Senate

November 30, 2005 - Update: The bill passed committee and will be heard on the Senate Floor

S-517 had a committee hearing Thursday, November 10, 2005 at 2:30 pm ET.

Tom DeFelice was in attendance. The session went well. Their opposition witness turned out in support of the bill. There was one testimony about drought that was not heard but entered into the minutes. Transcripts of that testimony were not made available for viewing however. There will be a vote, the results of which should be known Tuesday, November 15th. Tom DeFelice will be meeting with John Leedom in the meantime and will follow up on this.

The Weather Modification Association (WMA) was organized in 1950 to cultivate a better understanding of weather modification techniques, impacts, and expectations among program sponsors, program operators, and the scientific community, and to promote ethical professional conduct and a free exchange of information.

Weather modification can be both planned, as is the case in cloud seeding (cloud modification), or inadvertent, for example, when pollution affects visibility.

Planned (deliberate) weather modification is also commonly known cloud seeding, cloud modification, and atmospheric water management.

The WMA fields a wide variety of inquiries, from domestic and foreign governmental agencies, to the student doing a report for the classroom.
