Five Day FORECAST

The Air District issues a daily air quality forecast that predicts air pollution levels for the coming five-day period. This forecast uses the U.S. EPA's [Air Quality Index](#) scale.

For forecasting purposes, cities in the Bay Area have been divided into [five reporting zones](#). The cities within each reporting zone are listed [here](#).

Please note Winter Spare the Air Alerts apply to the entire region, regardless of the zone-specific forecast. During a Winter Spare the Air Alert, woodburning is illegal in the entire nine-county Bay Area.
