Creating a Stealth Internet

A project known as an “Internet in a suitcase” could allow dissidents to communicate in countries where the state-controlled network is heavily censored or shut down.

**TYPICAL INTERNET CONNECTION**

The government can easily shut down access to the global internet with a kind of on-off switch.

**INTERNET IN A SUITCASE**

A mesh network uses special software that enables information to directly hop between cellphones and computers without going through the state-controlled system.
