All across the world, states, provinces and local governments are providing real leadership to address the challenge of climate change.

I am pleased to join Governor Schwarzenegger and other Governors of American states in providing a forum where we can assess the progress we are making and focus on important next steps.

Climate Change is clearly the major environmental challenge of our generation – and the upcoming **Governors' Global Climate Summit 2** offers us a real opportunity to make certain we successfully meet this challenge.

Sincerely,

Governor M. Jodi Rell of Connecticut

## Summit Overview and Conference Pricing

Hyatt Regency Century Plaza Hotel • Los Angeles, California • September 30 – October 2, 2009

**Please be advised that this is an international, multilingual Summit. Simultaneous interpretation will be provided in English, Mandarin, Portuguese, and Spanish.**

**Please do not forget to pick up headsets at interpretation services before the start of Summit.**

### Goal

Deepen and broaden cooperative efforts by subnational governments to implement strategies that can immediately grow a green economy, increase the use of sustainable clean energy, reduce dependence on oil and reduce greenhouse gas emissions in and in support of, the next global agreement on climate change.

### Objectives

- Expand our network of subnational collaboration to stimulate economic growth, create green jobs, increase the use of clean energy while reducing greenhouse gas pollution.
- Strengthen existing partnerships between progressive states, provinces and regions to exchange best practices, support transfers and maximize resources.
- Highlight the new synergy between federal and subnational governments to demonstrate the important roles each play in a green economy and fighting global warming.
- Demonstrate that subnational leadership is helping to develop sectoral solutions in the global marketplace.
- Establish stronger links around the world with non-traditional partners in the global effort to grow a green economy, promote clean energy and reduce greenhouse gases (i.e. academics, scientists, investors, business, non-government organizations, etc.).
- Promote official recognition by the United Nations for subnational leadership and support in the next international climate agreement.

### Expected Attendee Demographics

- Environmental Executives (Nonprofit, NGOs, Corporate)
